

# POWER PLANT EXPERTISE WITH OWNERSHIP

**Building power plants is a complex business. Fortunately, BWSC has the experience and expertise to take ownership of the entire process.**

Just take a look at our track record: more than 180 power plants, providing a total installed capacity of some 3,800 MW in 54 countries.

So maybe you are designing a gas-fuelled power plant. Or perhaps you are considering investing in a power barge, expanding a power station or maintaining an ageing platform.

Regardless of your project, BWSC's ability to provide four core areas of expertise – turnkey solutions, project development, financing and co-investment and operation & maintenance – ensures you reach your goals and see a solid return on investments.

Because even though building power plants is complex, owning one doesn't have to be.

## REASONS TO CHOOSE BWSC

### TURNKEY SOLUTIONS

#### The complete package

Thanks to our extensive experience, BWSC is able to deliver complete power stations that are ready to go to work from Day 1.

Our core values ensure that our projects are handed over on time and within the allotted budget. And while we utilize prefabricated and modular elements to expedite construction, our signature projects draw on our ability to develop custom solutions and choose the best available technology on the market to the benefit of our clients.

### PROJECT DEVELOPMENT

#### Your development partner

BWSC has acted as both developer and investor on numerous power plant projects. This enables us to support our partners in all aspects of project development: from discussing the project's scope and setting up joint development partnerships to negotiating agreements and implementing the project.

Cooperation between BWSC and our partners is typically organised through exclusive no-cost support agreements or as full, co-development agreements where all partners share development responsibility.

### FINANCING AND CO-INVESTMENT

#### The finance specialists

We strive to ensure quick return on your investments. To aid investors and lenders, BWSC offers financing assistance that puts our experience with project-funding and our extensive network in the finance world to work.

In this way, we deliver economic models that offer a healthy operating budget and bottom line. BWSC can also invest in and provide asset management services as an active owner throughout the lifespan of the plant. At present, we have invested in ten projects around the globe.

### OPERATION AND MAINTENANCE

#### Onsite power plant presence

Building a power plant is one thing. Keeping it online and running without interruptions is another. To make sure the power plant realises its full potential and return on investment, BWSC provides a variety of post-construction services:

- long-term operation and maintenance (O&M) contracts
- technical service agreements (TSA)
- training, upgrades and rehabilitation of power plants
- sale of spare parts

The composition of services will be tailored to fit your specific project requirements.
